EDUCATION

CUNY Hunter College - Bachelor's in Computer Science, Minor in Mathematics Expected December 2026
Relevant Coursework: OS, Computer Architecture, Theory of Computation, Discrete Mathematics, AI Agents

SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL, Bash, HTML/CSS
Frameworks & Libraries: Flask, React, Next.js, Node.js, Express, Pandas, NumPy, Matplotlib
Tools & Infrastructure: Linux (CLI), GitHub, pytest, CI/CD, SQLite, MongoDB, REST APIs, SSE

EXPERIENCE

Full-Stack Web Developer | Basic Church of NJ (뉴저지 베이직교회) River Edge, NJ | Nov. 2023 – Present

- Designed and deployed a serverless content-management API on Netlify Functions (Node.js), exposing structured JSON endpoints consumed by a React frontend.
- Replaced a legacy SaaS CMS with the custom serverless architecture, eliminating vendor lock-in and cutting annual hosting costs by 91%.
- Automated deployments with a Git-based Netlify CI/CD pipeline, achieving sub-30-second build-to-live latency.
- Cut page load time from 3.0s to under 1.5s, improved Largest Contentful Paint by 74%, and eliminated 647ms of blocking time (measured via GTmetrix).

Undergraduate Research Assistant | St. John's University New York, NY | Jan. 2022 – Jan. 2023

- Validated and quality-controlled cancer-cell count datasets across experimental plates from in vitro and in vivo studies, producing the cleaned data used for quantitative treatment-response analysis.
- Conducted a structured review of peer-reviewed oncology studies, cross-referencing reported experimental data to shortlist candidate treatment compounds.

PROJECTS

Fairfare — Anonymous Group Travel Planner | React, JavaScript, Supabase, REST APIs ffare.vercel.app

- Built and deployed a group travel planner combining shared availability, private budgets, flight comparisons, and destination recommendations.
- Designed a weighted destination-ranking algorithm that balances traveler budgets and preferences with least-satisfied traveler scoring to improve group consensus.

StockMind — Options Analytics Platform (Senior Capstone) | *Python, Flask, SSE* github.com/jojule21/StockMind

- Led backend development for a 3-person capstone team building an options analytics platform for retail investors.
- Engineered Flask REST endpoints and an SSE market-data stream using Yahoo Finance, with timeouts and cancellation for long-running simulations.
- Decoupled a parallelized Monte Carlo pricing engine from the API through an adapter layer; built mock-data services to unblock frontend development.

Kaudit — Treasury Reconciliation Engine | *Python, SQLite, Pandas* github.com/jojule21/Kaudit

- Developed a Python ETL pipeline to parse bank/card CSVs and invoice PDFs, reconcile transactions, and flag overbilling and mismatched charges.
- Implemented a SQLite audit trail and queryable discrepancy reports, replacing manual reconciliation with a repeatable workflow.

echochamber — LLM Media-Bias Analyzer | *Next.js, Node.js, LLM APIs* github.com/jojule21/echochamber

- Built a Next.js media-bias analyzer that retrieves CNN and Fox News headlines via NewsAPI and evaluates article bias using a local Ollama LLM.
- Designed an LLM prompt pipeline and cached API responses to deliver structured bias scores to the frontend.

LEADERSHIP

Grand Treasurer | Kappa Sigma Fraternity, Sigma Epsilon Chapter New York, NY | Sept. 2024 – Present

- Manage a $30,000 cumulative operating budget, overseeing all accounts payable/receivable and dues collection for the chapter.
- Migrated chapter finances from Greek Capital Management to MyGreek, porting 40 member accounts and payment histories, saving $2,500/year in fees.
- Recovered $1,300 in sunk costs through a forensic audit of a $7,000 financial subset, identifying member-misclassification errors.
